

Biofiber Board

LEC

AVAILABLE IN THE EU

The Fundermax biofiber board is made of 100% sustainable, certified wood. The production is based on a wet fiber process which avoids any petrochemical binder. Instead, the wood's own natural resins - lignin - are dissolved and serve as binders in the board. The product can be used for interior wall construction, and furniture and also finds use in product design. The product is Natureplus certified and labelled as QNG Ready. Per the manufacturer, it has good paintability with a mineral-based paint such as Keim.
