

Magnum Board MgO

 AVAILABLE AT THE DONGHIA MATERIALS LIBRARY

Magnum Board is a mineral-based sheathing board with comparable uses to gypsum panels or cement boards. The ingredient magnesium oxide makes the product naturally fire and mold resistant and impervious to insects. It is free of added formaldehyde. Per Manufacturer, perlite and wood fiber are used to reduce density and strengthen the board. Magnum Board is produced at ambient temperatures which can contribute to a lower embodied carbon footprint.

CATEGORY **MANUFACTURER**
Drywall, Magnesium Oxide **Magnum Board Products**

MATERIAL COMPOSITION*

Magnesium oxide, magnesium chloride, cellulose, perlite, fiberglass scrim, proprietary additives (less than 1% per manufacturer)

**as reported by the manufacturer*

AVAILABLE SIZING

Lengths: 8' 9' and 10', Width: 4', Thicknesses: 3mm (1/8") to 20mm (3/4")
