

Mogu Acoustics

AVAILABLE AT THE DONGHIA
MATERIALS LIBRARY

Mogu Acoustics are grown using a proprietary fungal strain with hemp and cotton waste to create a variety tile shapes and colors. The mycelium tiles have excellent acoustic performance in the medium frequencies (250-1000 hz) and are naturally flame retardant. These tiles can be fixed in place with screws, clips, magnets or organized within FSC-sourced lime wood system called Foresta.

Note: These tiles are finished with a low-VOC, heavy-metal free, water-based paint. Per manufacturer, you can request no finish, but this will make the tiles more sensitive to stains and scratches.

CATEGORY

Acoustics, Mycelium

MANUFACTURER

Mogu

MATERIAL COMPOSITION*

Mogu Acoustic tiles are composed of mycelium, hemp shives, cotton, and optional paint finish (water-based, heavy-metal free bicomponent dispersion with low VOC)
