

Naturefloor

AVAILABLE AT THE DONGHIA
MATERIALS LIBRARY

AVAILABLE IN THE EU

Naturefloor's loose floor fill is composed of wood chips from waste wood and clay. They get mixed together avoiding additives or no further treatment; clay protects wood when dry due to its equilibrium moisture content of 3-5%. This prevents mildew and animal pests. The angularity of the material ensures high dimensional stability when installed. The fill is extremely pressure-resistant and guarantees excellent sound insulation values. The clay coating also reduces flammability.

CATEGORY

Insulation / Fibrous, Cellulosic, Granular, Wood

MANUFACTURER

Naturefloor

MATERIAL COMPOSITION*

wood chips, clay

**as reported by the manufacturer*
