

Ocean Ink®

LEC

PRODUCT IN DEVELOPMENT

OCEAN INK is extracted from brown seaweed biomass for screen printing on packaging products. The ink naturally contains both the pigment and the binder, therefore does not require additives. It is 100% biodegradable and can accelerate compostability of PLA in 3D printing filaments. Available in gold and black ink. Oceanium promotes cold water seaweed farming and aims to utilize the majority of the biomass by utilizing different polysaccharides and proteins for various product applications.

CATEGORY

Pigment / Biobased, Seaweed

MANUFACTURER

Oceanium

MATERIAL COMPOSITION*

Seaweed

**as reported by the manufacturer*
