

Innate + In Tandem

LEC LOW-EMBODIED CARBON MATERIAL

Shaw's Innate + In Tandem are biobased flooring products composed of up to 50% vegetable oils. These include canola, rapeseed and castor oils. The floor compositions avoid orthophthalates, chlorine and solvents, and are FloorScore certified for low VOC. They are Cradle to Cradle certified SILVER and are Greenhealth Approved from Healthcare without Harm. Shaw's biobased products are healthier alternatives for LVT, however, isocyanates still occur within the polyurethane processing method.

Per Shaw's product-specific EPDs, this product line meets HML's criteria for low embodied carbon.

CATEGORY **MANUFACTURER**
Resilient, Biobased **Shaw Contract**

MATERIAL COMPOSITION*

Calcium Carbonate 40-59%, Biobased Polyurethane 30-50%, Aluminum Trihydrate 1-5%, Zeolite 1-5%, Undisclosed 0.5-1%, White Mineral Oil 0.2-0.5%, Fiberglass 0-3%, PET 0-3%, Polypropylene 0-3%, Cellulose 0-2%, Clay 0-2%, Titanium Dioxide 0-0.1%

**as reported by the manufacturer*
