

## View Smart Glass

View Smart Windows uses the latest technology to adjust for sunlight, maximizing natural light while minimizing heat and glare. The windows have adaptable tint control with electrochromic coatings and flexible configurations for different building needs. Choosing tinted glass over blinds reduces potentially harmful PFAS and flame retardants commonly found in shades. The product is declared per an HPD and provides LCA information per an EPD. The windows suit various settings, including offices, apartments, schools, hospitals, airports, and hotels.
