

Viroc

Viroc is a composite material, made from a mixture of pine wood particles and cement. This lends the particle board the flexibility of wood with the look of poured concrete. Viroc is ideal for interior cladding, ceilings, trim, countertop, and other specialty applications. This material is moisture resistant, fire retardant, and load bearing, and provides thermal and acoustic insulation.

CATEGORY

Dimensional Surface, Particle Board

MANUFACTURER

Investwood

MATERIAL COMPOSITION*

Portland Cement, Pine wood shavings, Sodium Silicate, Aluminum Sulphate, Water

**as reported by the manufacturer*
