

Accoya Wood

 AVAILABLE AT THE DONGHIA MATERIALS LIBRARY

Accoya® wood is an acetylated wood product that absorbs 80% less water than untreated wood. Acetylation is a process that uses non-toxic acetic anhydride to make wood more water, mold, and insect resistant. Accsys' Accoya® products can be used for siding, decking, windows, and doors. The wood is FSC certified. These products are rated Cradle to Cradle | Gold overall, and received a Platinum rating for material health.

While this product is recommendable regarding material health, its transportation during fabrication between New Zealand and The Netherlands does not meet HML standards for GWP. A local option with comparable material health is recommended.

CATEGORY	MANUFACTURER
Timber, Engineered Lumber	Accsys

MATERIAL COMPOSITION*

99.9% Radiata Pine, <0.1% acetic anhydride

**as reported by the manufacturer*
