

# Insulation Panel

These panels are grown using Ecovative's MycoComposite - a combination of mycelium and regionally sourced non-food agricultural waste. They can be used between two walls or placed between two glass layers to showcase the mycelium texture. MycoComposite is biodegradable, naturally flame resistant, and water resistant.

## CATEGORY

**Board Insulation, Mycelium**

## MANUFACTURER

**Grown.Bio**

## MATERIAL COMPOSITION\*

Mycelium (binder), hemp (substrate), flour (nutrition)

*\*As reported by manufacturer*

*\*as reported by the manufacturer*

## AVAILABLE SIZING

1200 mm x 600 mm x 60 mm

## COLORS

Natural
