

Mycelium Leather

This leather is grown rapidly from mycelium and agricultural by-products in a carbon-negative process. Mycelium Leather is strong, flexible, and durable, just like conventional leathers. It is also water-resistant. And since it's made from natural fibers, it breathes and feels like leather.

CATEGORY

Textile, Mycelium

MANUFACTURER

Mycoworks

MATERIAL COMPOSITION*

Mycoworks uses mycelium and agricultural by-products.

**as reported by the manufacturer*
