

Reishi™

AVAILABLE AT THE DONGHIA
MATERIALS LIBRARY

Reishi™ is a leather grown through a proprietary Fine Mycelium™ process. This leather is grown rapidly from engineered mycelium and agricultural by-products and is strong, flexible, and durable, just like conventional leathers. It is also water-resistant and uses chrome-free tanning and dyeing processes. Reishi™ can be embedded with a cotton or recycled polyester fabric (where the mycelium binds to the backing) or be grown as 100% mycelium depending on the application. Mycoworks uses fungi indigenous to their manufacturing locations.

CATEGORY MANUFACTURER

Textile, Mycelium **Mycoworks**

MATERIAL COMPOSITION*

mycelium, sawdust, agricultural by-products

**as reported by the manufacturer*
