

# No. 389 Wallpaper Paste

The No. 389 Wallpaper paste is pure methylcellulose and mixed with water onsite to apply. AURO consistently uses natural materials and discloses 100% of their ingredients on their website's Raw Materials Guide. Per manufacturer, mold growth only can happen if the product remains in a wet condition.

The product itself is a powder which will be mixed with water. After application the water evaporates and the cellulose will dry again. Added <0.5% Glyoxal helps avoid Cellulose to stick together.
