Panoramic Porcelain Surfaces

AVAILABLE AT THE DONGHIA MATERIALS LIBRARY

DalTile's Panoramic Porcelain Surfaces are comprised of silica, quartz, mullite, and feldspar. Raw materials are extracted from quarries with environmental recovery plans according to EU Directive 92/43 / EEC. Due to their production process and material composition, these products require no additional sealants which often contain toxic materials. Their surfaces mimic the appearance of natural stone slabs and concrete and can be used for floors, walls, and countertops.

CATEGORY
Tile, Porcelain

MANUFACTURER
Daltile

MATERIAL COMPOSITION*
Silica 75-85%, Quartz 10-15%, Mullite 2.5-5%, Feldspar 0-5%
**as reported by the manufacturer*
