Sheep Wool Insulation

Black Mountain's sheep wool insulation provides an excellent alternative to manmade batt insulation products. The product is designed for use in loft, rafter, internal wall, and inter-floor applications. Because it is a natural material, this wool insulation is completely biodegradable and requires 85% less embodied energy to produce than manmade products. Additionally, wool actively improves indoor air quality by absorbing carbon dioxide and toxic gasses such as formaldehyde and is naturally flame retardant.

The R-value range is declared as 6.5-49.

CATEGORY

Insulation / Fibrous, Cellulosic, Granular, Wool

MANUFACTURER

Black Mountain

MATERIAL COMPOSITION*

Sheep Wool 98%, Thorlan IW 1%, Polyproylen-mesh 1%

**as reported by the manufacturer*

AVAILABLE SIZING

14.5" and 22.5" wide rolls, available in 3.5" and 5.25" thicknesses
