

Sintered Stone Slabs

A HEALTHIER AFFORDABLE
BUILDING PRODUCT

AVAILABLE AT THE DONGHIA
MATERIALS LIBRARY

Lapitec is an alternative to marble made from natural minerals using vacuum vibro-compression, drying, and sintering (joining the mineral grains together through heat and pressure only). Despite smaller amounts of initially hazardous materials (see HPD for further information), the process of sintering effects a physical change in the material that renders these ingredients benign and inert. Lapitec's product life cycle is reversible meaning it could be converted back into raw minerals and reused; production is fueled by mostly renewable energy. It is available in the form of slabs, tiles, and any other cut-to-size product and is suitable for interior or exterior cladding, paving, flooring, curtain walling, and ventilated facades.
